## Sliding door: product description

---

The Invisible-door sliding door is the ideal solution to eliminate the presence of the door casings. The door slides completely into the wall with a silent and fluid movement guaranteed by the proven pocket door frame.

## Technical features and details

---

The Invisible-door pocket door integrates seamlessly with the wall thanks to the absence of frame covers and the possibility of finishing it on site. The sliding panel 40 mm thick is made of honeycomb with solid wood perimeter and core honeycomb and ended up with 2 polished MDF panels; it slides completely within the wall, suspended to the guide of the frame, which ensures quietness, ease of movement and a guaranteed life. It is bundled with a recessed handle that allows you to open and close the door. On request it is available with privacy pin

## Available sizes

---

The Invisible-door flush to the wall pocket door is available in standard sizes (width 60-70-80 cm and height 210 cm), the solution for the maximum convenience, and in custom sizes for absolute design freedom.
